Let's All Do Our Part!

Our business, along with many other industries, is being greatly affected by conditions that exist not only in this country, but the world at large. We are unable, from day to day, to anticipate the future. However, plans will be made and will be completed; there will be a great deal of satisfaction in having "carried on."

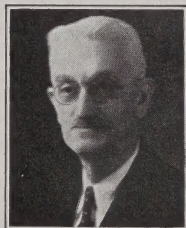

You can assure yourself a measure of this satisfaction by planting a home garden. The investment in good seeds is small; the dividends large. A kitchen garden will supply quantities of fresh vegetables, and a flower garden will afford pleasure, and interest in abundance.

In greater numbers than ever before, real honest-to-goodness folks have been, during these months of anxiety, turning to gardening as an outlet for their energies. There is something about growing plants that cannot fail to put faith and renewed hope into the heart and mind. Besides providing a profitable recreation, there is nothing that can compare with the cheery beauty of a well-planned, well-cared-for garden of flowers and vegetables.

We will do our part by listing in this catalog the very best seeds and garden requisites available, and will look forward to receiving your early order while stocks are complete.

Sincerely yours,

C. R. Root

SUPERB GLADIOLUS

**MORE POPULAR THAN
EVER—ALL POSTPAID**

The Gladiolus are the most attractive and useful cut flowers of all the summer flowering bulbs. The long, graceful spikes that carry fifteen to twenty buds may be cut soon as the first flower buds show color; then, if kept in water each successive bud will develop and thus prolong the blooming many days.

The planting season starts in April, and continues until in June, at intervals of 2 weeks; you thus have flowers from late July until frost time. Best results are obtained in a sunny position and placing the bulbs fully 6 inches deep. Water freely.

A very complete **Cultural Leaflet on Gladiolus** free with orders upon request. To eliminate Aphids and Thrip treat with Semesan, or Corrosive Sublimate, and store with Naphthalene flakes.

6 bulbs of a kind at dozen rate; 25 of a kind at 100 rate.

This assortment includes one bulb each of 18 different varieties though not labeled. **This Collection is Extraordinary.**

Caution Be sure and treat all Gladiolus Bulbs before planting. The past few years there has been great damage caused by Gladiolus Thrips. They injure the foliage and unfolded buds so that they do not open. Be on the safe side, whether planting new stock or bulbs saved from previous years, treat the bulbs just before planting. Semesan or Lysol are very effective treatments.

SEMESAN. 2-oz. can, with full directions, 35c, postpaid.

LYSOL. May be obtained from any drug store. **Directions:** Use one teaspoonful to a quart of water. For large lots, use one pint to 25 gallons water. Heat this solution to about 90 degrees. Put the bulbs (in thin cloth bags) into solution. Let remain for 8 to 10 hours. Solution need not be kept up to 90 degrees, but keep it and the room warm while bulbs are soaking. Do not heat solution hotter than 90 degrees, somewhat less will do, but solution must be warm and room warm to get best results.

Book "Evergreens for Colorado Landscaping", by Robert E. More. A complete list of Evergreen varieties hardy to Colorado. **Only 35c postpaid.**

How to Plant The planting of balled and burlapped Evergreens is very simple. They like a good loamy soil, with drainage provided. The burlap should be left on the ball of earth and placed in the hole so that the top of ball is just below the soil surface. Usually a soil mark on the stem will show the depth it was growing in the nursery. The soil which is used to fill in around the ball should be tamped firmly. A thorough watering is very necessary after planting.

Our stock is all examined by State Entomologists and properly approved before being shipped.

We list only varieties which are hardy and do well in our Western locality. Our stock is nursery grown, well rooted, well shaped and carefully dug with a ball of earth on the roots. They are ready in early March and may be planted until the middle of May. Balled and burlapped trees cannot be mailed. They are best shipped by express or truck. Prices are all F. O. B. Denver—you pay transportation charges on arrival.

SMALL FRUITS - All Postpaid

STRAWBERRIES

Buy one-year-old plants and get them into the ground as soon as you can. Before planting, dip the roots in water. Set the plant with the crown or bud at the surface of the ground. April and early May is the best time to set the plants. If in May, the leaves should be trimmed. We do not recommend fall planting.

For best results with Strawberries, give all-day sunshine and apply nitrate of soda or fine bone-meal fertilizer in June. Strawberry plants are packed 25 in a bunch. We cannot accept orders for Strawberry plants after May 10th. They are too far advanced in growth.

We cannot be responsible for Strawberry plants after they leave us in good condition.

Mastodon A very popular Everbearing variety. The giant of all Everbearings. Produces heavily in July, then renews its productiveness in August and continues until freezing-up time. The berries are very large, firm and uniformly well colored. Tests have shown 18 berries to fill a quart box. Three berries weighed 2 ounces. They have a very fragrant aroma. 25 plants for 50c; 50 plants for 75c; 100 plants \$1.25; 1,000 plants for \$11.00, all postpaid.

The New "Gem" A large round Everbearing variety that is much admired for its uniformity in color, size, and productiveness. Is earlier than Mastodon. 25 plants for 50c; 50 plants for 75c; 100 plants for \$1.25; 1,000 plants for \$11.00, all postpaid.

ASPARAGUS

Asparagus is a slow grower, requiring at least three years to mature from seed, and is therefore not generally recommended to the small gardener. Usually unless you go into Asparagus raising on a large scale, it is better that you get the roots in preference to raising from seed.

Mary Washington Rust-Proof Is green with pinkish tint at bottom. Our seed is direct from pedigreed stock which is practically rust-proof. This will eventually supersede all other varieties. **Pkt. 5c; oz. 10c; 1/4 lb. 35c; 1 lb. \$1.00.**

BEANS, GARDEN - DWARF

One pound will plant 100 feet, 60 pounds an acre.

Bush Beans should be planted about the last of May. The furrows should be at least 2 feet apart. A pound of wood ashes should be hoed into every 10 feet of furrow, leaving the furrow not more than an inch deep. Plant the Beans 4 inches apart in the furrow and cover them with an inch of soil. They come up in from 8 to 10 days, and the plants mature in from 6 to 9 weeks. Thorough tilling is essential; the ground must be kept soft. Avoid handling or touching the vines in damp weather.

When Bean beetles trouble, pick off all you see, then use Arsenate of Lead.

NITRAGEN INOCULATING BACTERIA will increase your Bean crop.

Two ounces
for 100 feet
of drill.

The rows in which Beets are planted should be a foot apart. Along each row, in a furrow or small trench 1 inch deep, drop the seeds 1 or 2 inches apart; then cover with fine soil, pressing down firm. When the plants are about 4 inches high, thin out to from 3 to 4 inches apart. The plants pulled up can be used for greens. Beets should be ready for eating in from 8 to 12 weeks. Keep the ground loose and well tilled.

Detroit Dark Red "Dependable Grade." We believe this is the best beet for the market and home garden and on account of its uniform deep rich color the most desirable for canning. Roots are medium size, nearly round, very smooth and of dark blood-red color. Very crisp, tender and sweet, remaining so a long time. **Pkt. 5c; oz. 25c; ¼ lb. 75c; lb. \$2.25.**

CABBAGE

Three ounces of seed to 100 yards of row. One ounce will produce 2,000 plants.

The best way to raise Cabbage in the small garden is from the plants. Cabbage requires an abundance of both moisture and tilling. It is also advisable to enrich the ground if possible. Fertilizer may be conserved by placing a small amount under each hill before plants are set. It will pay you to set out both early and late varieties. Set early Cabbage 18 inches apart in rows and 2 feet apart between rows. Late Cabbage 2 feet apart in rows and 3 feet apart between rows. Cultural leaflet on request.

Eat CARROTS for Health

Two ounces
for 100 feet of drill.

Furrows for Carrots should be 14 inches apart and from a half-inch to an inch deep. The seed can be sown from mid-April to mid-May; it should be sown rather close, as Carrots do not germinate very well. Thin the plants out to 4 inches apart when they are 4 inches high. Soil for Carrots should be particularly well tilled before they are planted.

Chantenay Carrot

Early Danish Perfection

Golden Self-Blanching

Golden Bantam

Stowell's Evergreen

CAULIFLOWER

One ounce will sow a bed 40 square feet and produce about 2,000 plants.

All our Danish seed is growers' first quality sifted, thus higher cost. For the small garden we advise getting Cauliflower plants in preference to growing from seed. The cultivation is the same as that of Cabbage, except that Cauliflower favors a moister soil. Proper tilling and watering affect this very much. Tie the long leaves together over the growing head to keep it white. Plants ready in April and May. Treat the seed with Semesan.

Early Danish Perfection Snowball "Dependable Grade." Positively nothing better for earliness and quality; produces fine white heads. The outer leaves are short, allowing the plants to be set closer together than most varieties, 18 to 20 inches being far enough apart. **Pkt. 25c; ¼ oz. \$1.25; oz. \$4.00.**

Late Snowball or **Dry Weather.** A popular strain for late crop. Danish grown sifted seed. **Pkt. 25c; ¼ oz. \$1.25; oz. \$4.00.**

CAULIFLOWER PLANTS

SNOWBALL. Early, ready in April. By mail: **Doz. 25c; per 100 85c.** Not postpaid, see page 31.

HOTKAP PROTECTORS. Will save your early plants from frost. 12 for 25c; by mail 30c. 100 for \$1.50; by mail \$1.65. For larger quantity, see page 31.

CELERY

Three ounces of seed to 100 yards of row. One ounce will produce 7,000 to 10,000 good plants.

Celery, to be raised from the seed, requires almost expert care. It is better for those who are not practical gardeners to buy Celery plants. These are set out about the first of June, a foot apart, and mature along the last of September or during the first two weeks of October. Celery is by nature a marsh plant, and the soil about it must be kept wet, especially when the plants are young. When they get to be about 4 inches high, shear off the tops; it makes the plant more stocky. As the plants grow, gradually draw the earth up around them to keep the stalks white; by the end of fall all should be covered but the tops. A heavy paper wrapped around each stalk will insure tender, white plants. Celery is planted in rows that should be at least 3 feet apart. About 30,000 plants to the acre. Cultural leaflet on request.

CORN, SWEET

One pound will plant 100 hills. 10 pounds an acre.

Corn should be planted to the north of the garden, so as not to shade the other crops. It should not be planted in a very small garden unless it is the only crop to be raised. It needs shallow but continual tilling. Just after the middle of May is a good time to plant. The rows should be 3 feet apart, the kernels sown three together every 6 inches in the furrow. When the Corn is well started, pull out all but one stalk to each place. Keep the little shoots or suckers cut from the roots. The ears are ready to pick when the silk is brown and the kernels on the tip are plump.

LETTUCE All Select

One ounce for 200 feet of row. One ounce of Head Varieties will plant 400 feet of row. Two pounds per acre.

Lettuce will stand slight frosts, and is therefore one of the first things to plant; if the ground is well prepared, early April is not too soon. It can be planted up to the middle of July, and many prefer the later plantings. Place seed in trench half an inch deep, cover with fine soil to top of the trench and press the soil down. The plants should be up in about a week. If head varieties are wanted, thin to 4 or 5 inches. The heads are usually well formed in 10 weeks and should then be cut or they will rapidly go to seed, especially in hot weather. The rows of lettuce should be at least a foot apart. The quality of the lettuce depends on the tilling—keep the hoe busy.

*These varieties form heads.

RADISHES

One ounce for 100-foot row.

Radishes can be planted very early—as soon as the ground can be worked and no danger of frost. The roots must be from 8 inches to a foot apart, the furrows for the seeds about half an inch deep; and the seeds, when dropped into the furrow, about an inch apart. Press fine soil down over them to the depth of the furrow. As the plants grow, thin them out like beets. Radishes mature, depending on the kind, in from 4 to 6 weeks; the turnip-shaped ones are the earlier.

Vick's Early Scarlet Globe

One of the best for forcing, being globe-shaped, bright scarlet-red. Growers who force under glass should plant liberally of this stock, averaging your plantings 10 to 12 days apart. **Pkt. 5c; oz. 10c; ¼ lb. 25c; lb. 80c.**

Saxa A very select strain of all red, exceedingly early, round and does well under glass. **Pkt. 5c; oz. 10c; ¼ lb. 25c; lb. 75c.**

The roots continue brittle, mild and crisp, until full grown, with a peculiar delicious freshness not found in the other sorts. Rapid-growing, tender, with a delicate fine grain. Finest for market or family use. **Pkt. 5c; oz. 10c; ¼ lb. 25c; lb. 75c.**

CHINA ROSE. For winter, keeps well, rose color. **Pkt. 5c; oz. 10c; ¼ lb. 25c; lb. 75c.**

RHUBARB OR PIEPLANT

Like Asparagus and Celery, Rhubarb is best thought by non-professional gardeners in the form of roots. These are set out in the early spring, 3 feet apart in the furrow, and in rows 3 feet apart. Provided there is no standing water, Rhubarb grows well almost any kind of soil, under ordinary cultivation. Roots ready in spring and late fall.

VICTORIA. Large standard market variety, fine quality. **Pkt. 5c; oz. 15c; ¼ lb. 80c; lb. \$1.50.**

SPINACH

One ounce for 50-foot row; 10 pounds per acre.

It is best to sow Spinach as early in the spring as possible without danger of hard frost, because if it is not cut before the hot weather it will toughen and spoil. It should be a fertile soil.

SQUASH

Do not plant until all danger of frost is over. The bush summer varieties of Squash can be planted 5 feet apart, but the running winter varieties should be 8 to 10 feet apart.

TOMATOES *Delicious*

One ounce will produce 1,500 plants; ¼ pound to transplant for one acre.

Tomatoes are planted indoors in a window garden about the first of March. When the third leaf of a plant has formed, put the plant into a 3-inch pot or box. After all danger of frost is over the plants may be set in the ground. Do not plant Tomatoes within 3 feet of the top of the pot with your fingers, holding the plant between them; then turn the pot upside down, tapping it with a trowel or other tool, when the plant will easily come out. Place it in the ground, pressing the earth around it; if the earth is dry, water it as soon as the plants are set. Some people put a ring of heavy paper around the plant, at the top of the soil, to keep off cutworms. June 1st is the usual time for transplanting in northern latitudes. Tie the growing plants to stakes. We will have plants ready in May and June.

Tomato Seed should be carefully treated with **SEMESAN POWDER** to prevent disease.

WILT-RESISTANT VARIETIES

This class of tomatoes is especially desirable where blight and wilt affects the ordinary varieties. In any event they are good producers of ready market fruit.

Marhio or **MARVELOUS**. 80 days. A new pink fruited sort developed by the Ohio Agricultural Experiment Station. Is practically wilt-resistant and very productive, under glass or in open field. **Pkt. 5c; oz. 35c; ¼ lb. \$1.00.**

The Pritchard 73 days. (Scarlet Topper). The last wilt-resistant variety being developed by Prof. Pritchard of Washington, thus named in his honor. Medium early, smooth and solid, of scarlet color. Sets heavily, thus produces well. **Pkt. 5c; oz. 35c; ¼ lb. \$1.00.**

Marglobe 80 days. A variety brought to popularity by seed distributed from Washington. Is bright red and very round. Slightly later than Earliana but larger. The bearing season is long, thus especially suitable for home gardens. Much liked by canners. In New Jersey they claim nothing better in tomatoes. A truly wilt-resistant variety. **Pkt. 5c; oz. 35c; ¼ lb. \$1.00.**

Penn State 70 days. The new very early rich scarlet introduced by Dr. Myers of Penn. State College. Fruits in clusters, three to ten on a plant. Proving to be an excellent producer. A good home garden sort. **Pkt. 5c; 1 oz. 40c; ¼ lb. \$1.25.**

The seed we offer was grown from the introducer's stock. If you want a tomato that will give entire satisfaction in every respect, give this a trial. You will order more next year. **Pkt. 5c; oz. 30c; ¼ lb. 90c.**

SINGING CANARIES *American Raised*

Our birds are all strong and active. Every singer we sell has been tested and known by us as a singer. We cannot send out on trial or exchange birds. State the amount you wish to pay and leave the selection to us. The value of a bird is not in the plumage. All birds are graded as to singing qualities and range of notes.

Young birds available in August, September and October seldom have developed song, however the longer they are with same surroundings the sooner their song develops. Beginning in November you are better pleased with their song.

Birds **MUST** be shipped Express, thus give your Express Office, if different than your Post Office. We pack and deliver to express office, Denver. They usually carry safely anywhere in the United States. We supply feed and water cups in each box.

Hartz Mountain Canaries

These are the popular singers and usually are mixed in plumage. Considered the most vigorous.

"XX" GRADE. A reasonably good song, though not great variety in notes. \$7.50 and \$8.50.

"XXX" GRADE. Extra good in all respects, usually yellow plumage. \$9.00.

American Radio Warblers

These birds are real singers and of very attractive coloring, ranging from pure yellow to dark colors. You will be well pleased with these birds and price is reasonable at \$8.95 each.

Roller Singers

AMERICAN ROLLERS. We usually have a variety in stock. The price depends on the song. Our best stock arrives in November.

SELECT MALES. With very good song. \$10.00.

Female Birds for Breeding

Female birds are usually available January to May.

Dark. Each \$1.00.

Mixed plumage. Each \$1.25.

Yellow. Each \$1.50.

Roller Stock. Usually yellow. Each \$2.00.

PARRAKEETS (Lovebirds)
